3/01/10AMENDMENT TO THE CLAIMS

Please amend the claims as shown in the listing below.

- 1-6. (Cancelled)
7. (Currently Amended) A polyester resin composition, comprising:
- an amorphous polyester resin (I); ~~reacted partially with~~ a reactive compound (II) containing two or more glycidyl groups and/or isocyanate groups per molecule and having a weight average molecular weight of not less than 200 and not more than 500 thousands; and
 - an amorphous polyester resin (III),
- wherein only a portion of said two or more glycidyl groups and/or isocyanate groups of said reactive compound (II) is reacted with said amorphous polyester resin (I).
8. (Previously Presented) The polyester resin composition according to claim 7, wherein the amorphous polyester resin (I) contains an aromatic dicarboxylic acid of a carbon number of 8 to 14, and an aliphatic or alicyclic glycol of a carbon number of 2 to 10 at 50 mole % or more of an acid component and a glycol component, respectively.
9. (Original) The polyester resin composition according to claim 8, wherein the aromatic dicarboxylic acid of a carbon number of 8 to 14 is terephthalic acid and/or isophthalic acid.
10. (Previously Presented) The polyester resin composition according to claim 8, wherein the aliphatic or alicyclic glycol of a carbon number of 2 to 10 is at least one compound selected from the group consisting of ethylene glycol, diethylene glycol, neopentyl glycol, 1,4-cyclohexanedimethanol, 1,2-propanediol, 1,3-propanediol and 2-methyl-1,3-propanediol.
11. (Original) The polyester resin composition according to claim 7, wherein the reactive compound (II) is a copolymer comprising (X) 20 to 99% by weight of vinyl aromatic monomer, (Y) 1 to 80% by weight of hydroxyalkyl (meth) acrylate or glycidylalkyl (meth) acrylate, and (Z) 0 to 79% by weight of alkyl (meth) acrylate.
